## My business app verizon

Trying to find the right app for a particular area on Android is a lot like trying to order dinner at a restaurant with way too many options on the menu. How can you possibly find the right choice in such a crowded lineup? With the Google Play Store now boasting anywhere near 70 gazillion titles (last I checked), it's no easy task to figure out which apps rise above the rest and provide the best possible experiences. That's why I decided to go in and help. I've covered Android from the beginning and have seen more than my fair share of incredible and not so incredible apps. From interface design to practical value, I know what to look for and how to distinguish the ordinary from the extraordinary. And taking the time to really explore the whole menu of options and finding the cream of the crop is literally my job. Bit by bit, I've been figuring out the best Android apps for a variety of areas that are relevant to you, the modern mobile professional. Whether we're talking broad themes like organization and collaboration or specific needs like password management and notes, I'm doing it my job to find the best of the best for the categories that really matter. You can find links to stories with all my recommendations below — and be sure to check back regularly, as the recommendations will be reviewed routinely and the areas I cover will continue to expand over time. The best office apps for AndroidCreate an optimal Android office app power pack with these thoroughly researched recommendations. The best email and sms apps for AndroidGive yourself an edge in business communication with these exceptional Android messaging apps. The best calendar apps for AndroidStrengthen your Android calendar experience with these standout choices for serious professionals with a range of scheduling needs. The best Android apps for team collaborationStay connected and productive wherever you are with these premium collaboration apps for Android. The best privacy and security apps for AndroidFor scans malware or over-the-top security suites: These are the apps that will actually improve your security and protect your privacy on Android.De best Android apps to organize your lifeFrom projects to places and to-do lists to travel, these Android apps help you organize all the important areas of your life.6 efficiency enhancing Android appsEanska smart tools save you time so you can go straight to work. The best note-taking apps for AndroidNote takers, note: Whether you want gobs of features or uber simplicity, these are the best apps for collecting and managing info on Android. The best Android keyboard apps for productivity on the goHeads, busy professionals: The right Android keyboard app can save you precious time and unlock your performance potential. So what are you waiting for? The best travel apps for AndroidSave yourself time, and even money with these standout Android apps for business travel. The best Android Android managersNot all Android password management apps are created equal – so which one makes the most sense to you? The best Android file manager appsFrom optimizing your phone's storage to integrate your device with the cloud, these standout Android apps let you juggle files like a pro. The best Android widgets for busy pro Swan your Android home screen to a powerful productivity hub with these exceptional, business-friendly widgets. Android apps for Chromebooks: The most important thing makes your Chromebook a uniquely versatile modern computing machine with these Chrome-OS-enhanced apps. Related video: Now that you've built up your app arsenal, watch the tutorial below to learn how to get around Android in a snap. Copyright © 2020 IDG Communications, Inc. Yesterday, Verizon Wireless announced a new service plan for its corporate customers. The Package of Starters for Nationwide Small Business SharePlan allows small business subscribers to use shared Anytime Minutes, plus unlimited calls to each customer on Verizon's network and consolidated billing. Starting at a monthly rate of \$69.99, customers will get two lines and 700 shared minutes. In addition, they will be able to add more lines at a fixed price of \$9.99 per month per one. The Nationwide Small Business SharePlan will be available from May 17; for extra details about the new service, please, check our source link source: Verizon SUBSCRIBE TO OUR NEWSLETTER! Now that business users have started calling for Android phones seriously, it's a better time than ever to take a fresh look at the Android apps that are now available for business. There are more than 100,000 apps in the Android Market today, so finding the cream of the crop isn't always easy. What follows, however, is a look at 11 gems no business should be without.1. Scan2PDF MobileScan2PDF Mobile uses your mobile phone to scan documents and convert them to PDF files. Essentially, it turns your phone into a document scanner and fax machine that never leaves your page. The software improves and compresses the output from the camera into a high quality PDF, which is then stored on the phone and can be sent via email. Cost: A Lite version of Scan2PDF Mobile is available on the Android Market as a free demo; the regular version costs \$14.99.2. Recordoid DictaphoneThis application turns the phone into a retro dictaphone. Users can easily record audio and voice, add notes and send via email; they can also save and view the location on a map. A Lite version is available for free in the Android Market; the full version is available for \$1.99 elsewhere on the web. 3. Intuit GoPaymentIntuits GoPayment app allows you to accept credit card payments via your Android phone without any additional hardware. After payment has been approved, you can quickly email or sms an electronic receipt receipt to the customer. Cost: \$12.95 per month plus transaction fees. 4. GmoteGmote turns your Android phone into a remote control for a computer, allowing users to run presentations, movies and music from a distance. It supports all the usual remote control features including play, pause, rewind and volume controls, while a built-in file browser allows you to choose what to play. Cost: Free.5. TripIt TripIt organizes your business travel plans into an itinerary that has all your travel details in one place. Simply forward the confirmation email to plans@tripit.com and TripIt will automatically build an itinerary for your trip that you can access at any time, either online or from a mobile device. Cost: Free for the basic version, \$69 per year for the Pro edition, or \$399 for a business version that covers up to 10 travelers and includes a Group Manager.6. Universal TranslatorDLP Mobile's Universal Translator has a dual interface that lets users take turns speaking into the phone running the app. When the first user says something in one language, it is automatically translated and played in the second user's language with a properly accented computerized voice. Very convenient for international travel. Cost: \$1.99.7. TwidroidTwidroid – also known, curiously, as Twidroid – is a Twitter client for Android. Cost: It is available both for free and as a commercial pro version for \$3.99.8. RoadSyncFor companies that use Microsoft Exchange, DataViz's RoadSync app, you can sync an Android device with your company's Exchange servers using ActiveSync technology, so you can get push emails and rich HTML messages. Email, contacts, and calendar appointments can all be synced using the app. Cost: \$9.99, with a 14-day free trial on Android Market.9. Zagat to Golf you ever entertain corporate customers, Zagat to Go can be a lifesaver when it comes to finding a restaurant or other place. The app includes up-to-the-minute Zagat ratings and reviews for 40,000 restaurants, nightclubs, hotels and shops around the world, and it has GPS support for help finding places nearby. Best of listings, meanwhile, can help identify the hottest hotspots. Cost: \$9.99. Note: When you buy something after clicking on links in our articles we can earn a small commission. Read our affiliate link policy for more details. Opinions expressed by Entrepreneur Contributors are their own. Apps are transforming the business today. They improve availability, offer convenient data storage options and help streamline operations as well. But apps are only effective if you use the ones that are right for your business. If you're not sure where to start, looking at what apps are most popular among other companies might be a great place to start. In its annual Report from Businesses @ Work, cloud identity company Okta releases an annual ranking the most popular apps for business. The company analyzed data over the past year from customers who use Okta to sign in to their devices. Its customers range large companies with hundreds of thousands of employees in different industries. The report tabulates the most used and fastest growing apps your business uses, which can help you learn what you're missing. The most used appsWhen it comes to the highest ranked apps by the number of users, microsoft office 365 and Salesforce, have the top two places. Amazon Web Services and G Suite come in at third and fourth most popular locations, respectively. But when you rank apps by the number of monthly active users, things change a little. Office 365 retains its top spot, but Workday, ServiceNow, G Suite, and Salesforce follow suit at places two through five. Office 365 has nearly twice as many users as G Suite, but G Suite's growth over the past year is higher: The app's active monthly customers have increased by 50 percent, while Office 365 has only increased by 38 percent. Related: 9 Free apps that instantly make life easier striking and zoom both ranked in the top 10 for the most popular apps. Both of these collaboration apps are popular even among companies that already use an app like Microsoft Office. The evidence for their effectiveness is in their growth: Zoom experienced 76 percent compared to the same growth compared to the previous year. These apps are changing the way businesses work and they help remote teams become more efficient or just improve office operations. Other very popular and widely used apps include: Developer Tools: Atlassian Product Suite, GitHub, PagerDutyHR tools: Workday, BambooHR, UltiProVideo Conferencing: Zoom, Cisco Webex, RingCentralOnline Learning: LinkedIn Learning, Grammarly and PluralsightFastest-growing appsIn 2019, several apps stand out from the crowd due to their huge growth. Snowflake is the distant winner with 273 percent compared to the same growth compared to the same year. If you haven't yet caught on to the Snowflake trend yet, Snowflake is a cloud data platform that enables integrated data technology, secure data exchange, app development and more. Some of its main clients are CapitalOne, Lionsgate, Overstock and Nielsen. Opsgenie, Google Cloud and Splunk follow just behind Snowflake, each with over 100 percent compared to the same growth compared to the same year. Other fast-growing apps to look at include KnowBe4, Looker, Envoy and Freshservice. The increasing importance of securityThe report also revealed a remarkable trend: the increased use of security and data tools. As companies increasingly use data to shape their businesses, they turn to apps like Snowflake and Looker to help them evaluate that data and make informed business decisions. But with increased use of data comes an increased need for security. These security tools fall into four categories: Personal ProtectionDevice ProtectionNetwork protectionNetwork protectionCorporate infrastructure protectionSixty percent of Okta customers use at least one security tool from these four categories, and one four customers use a password manager or any other measure to protect them, personally, from Attacks. KnowBe4, a cybersecurity app, was the fifth fastest growing app in 2019, after increasing its customer accounts to over 28,000 during its growth of 55 percent compared to the same period last year. Related: 5 Security trends to look at in 2020This part of protecting a person is becoming increasingly important to small businesses when they depend on cloud technology. Companies that use G Suite, Slack, and Zoom put their data in a position where they are accessible with a username and password. Because of this vulnerability, increased security and personal account protection becomes more important than ever. With apps to build your businessIf you're ready to take your business to the next level, consider what works for other businesses. These fast-growing, widely used apps offer security, cloud storage, streamlined availability, and many other benefits. Adopting them for your business and team members can help improve performance and efficiency as you continue to build your business.
